

Groww Onboarding Teardown

January 2025

Presented by
Sai Harsha Malla

Screen 1

All things finance - This line does not truly communicate the core value prop of Groww.

‘One-Stop Shop for Stocks’ communicates the core value prop in a better way.

The second line is more apt where they have mentioned the core value prop (stocks and mutual funds).

Though they have launched Groww Payments, ‘Bills’ is not something the majority of users look for when they signup on Groww. It could be replaced with ‘IPOs’.

Cool graphic shown with the Groww logo.

Continue with Google option highlighted as most users would choose the same.

19:39:24

Enter mobile number

Mobile number needs to be linked to your bank account.

+91 10-digit number

You have logged in as [redacted]
[Edit email?](#)

Confirm

4 5 6 _

7 8 9 ✕

, 0 . ✓

Screen 2

Simple screen with only one field - progressive disclosure.

The option to edit email id is given to the user.

Screen 3 - OTP is asked to confirm the mobile number and it is auto-filled.

19:39:42

Set up Groww PIN

To keep your finances secure, we'll ask for this PIN every time you open the app.

[Four empty boxes for PIN input]

Screen 4

Simple screen with only one field - progressive disclosure.

This makes the user feel secure by setting up a PIN this early in the onboarding flow.

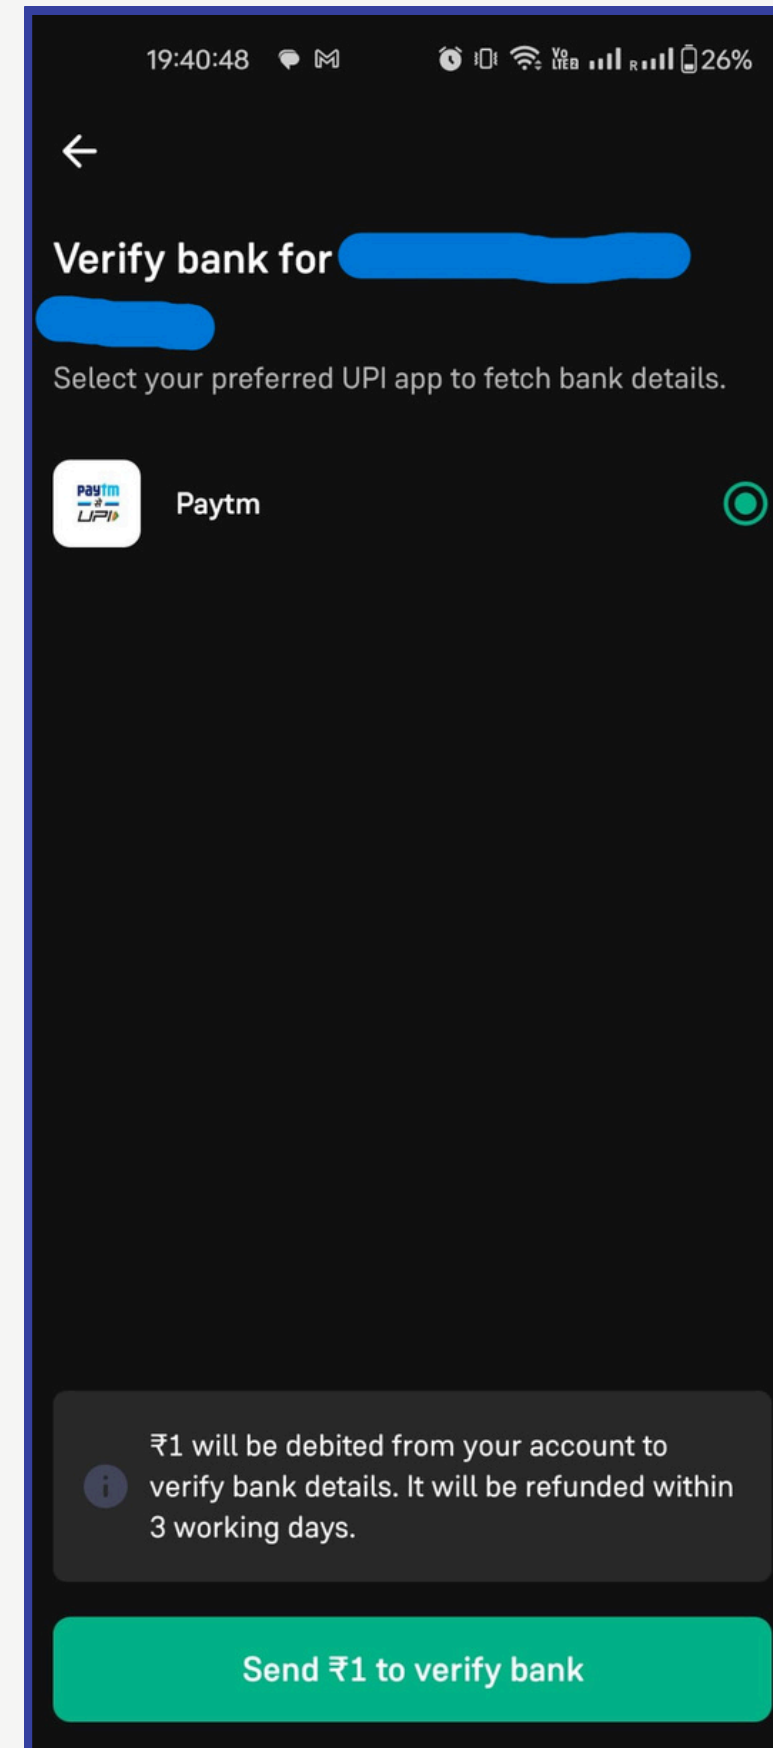

Screen 5

All permissions asked at the same time is smoother and more efficient.

This step ideally should be saved for after the signup process as it is a commitment from the user before they experience the core value prop.

But it is necessary for the onboarding process, hence cannot be avoided.

Another line added right above the button to build security and trust in the user.

Screen 6

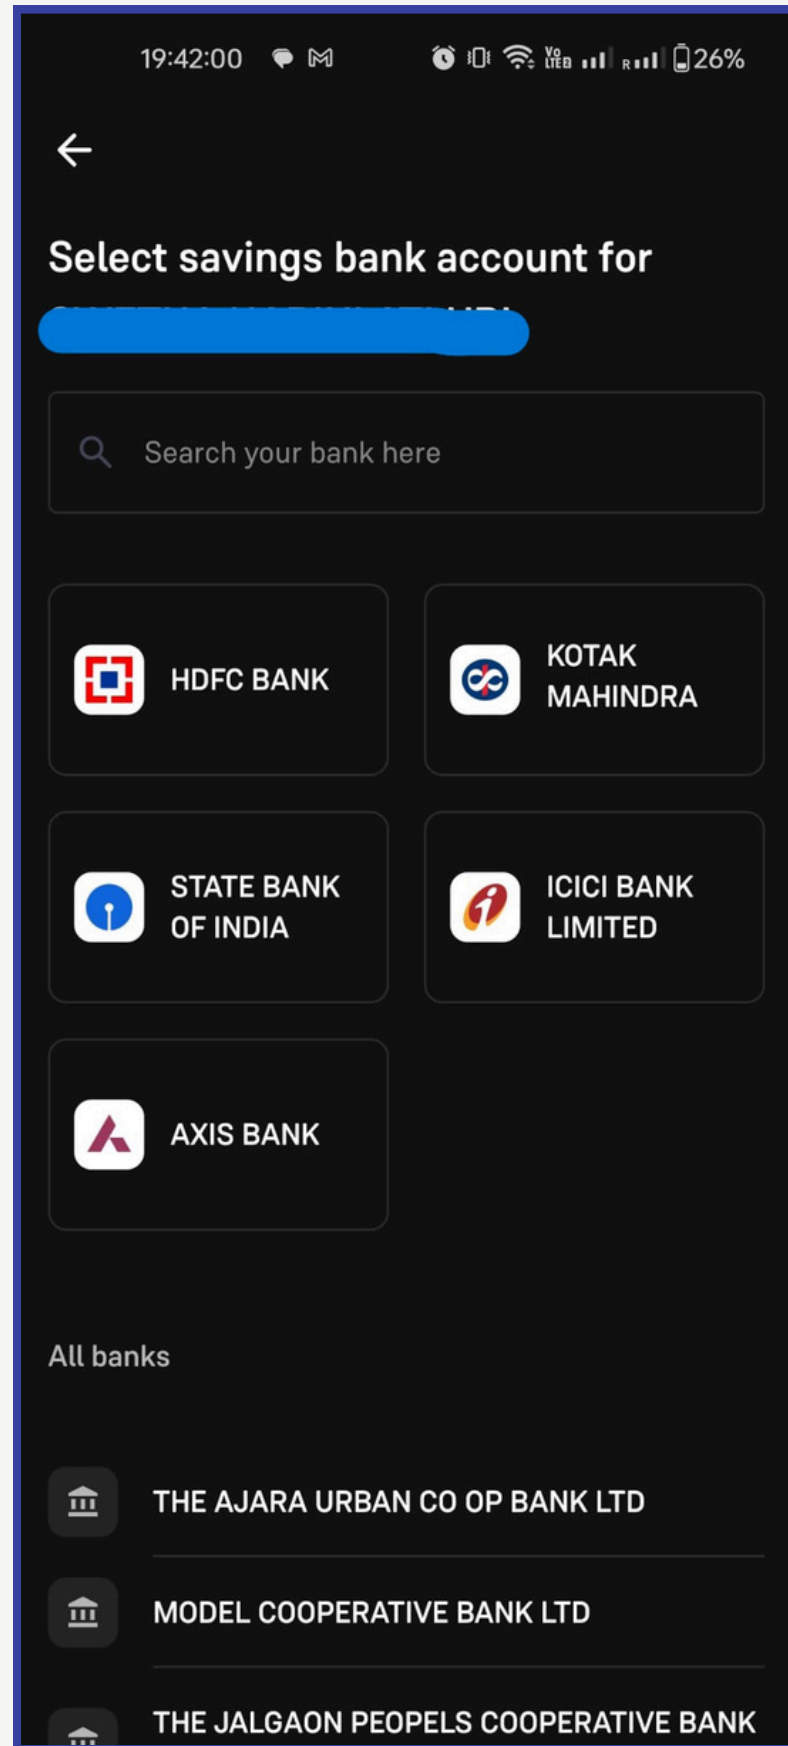

I did not see this screen when I onboarded onto the app (maybe because my mobile number was linked to my bank account, this is my friend's onboarding).

This could be a major drop off point, especially for people who are older and not tech savvy because the app is asking to debit money (commitment from the user). For example, my mother dropped off at this point as she thought this could be a scam.

Groww could do a better job here in 2 ways:

a) By employing another method to verify the bank details.

b) Add an infotip explaining why this needs to be done and that this is completely safe. It reduces cognitive load, improves the UI, and instils trust in the user.

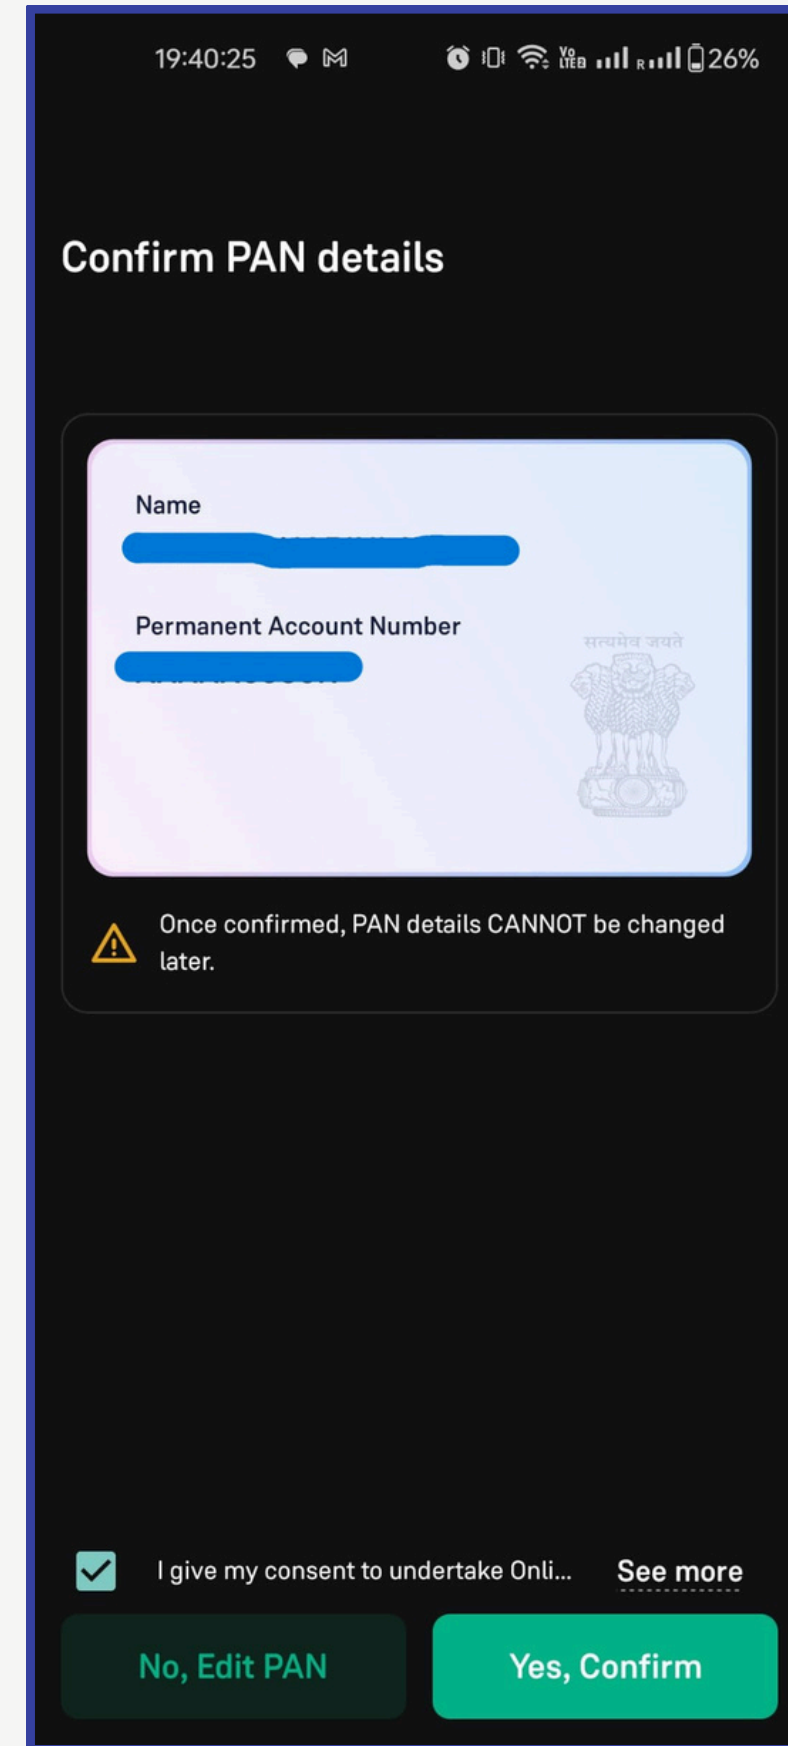

Screen 7

If the user's bank is not displayed, it could be cumbersome to search for it.

Screen 8 & 9 - Post selecting the bank, the IFSC and account number were asked in 2 consecutive screens (progressive disclosure).

This was not asked for me maybe because my bank account was linked to my mobile number. After selecting my bank, I was asked to choose one account from the multiple I had. The onboarding was much smoother for me because of this.

Screen 10

Auto fetched the PAN details. This is a mini aha moment not related to the value prop. The fetching of the PAN details was smooth and rapid.

The subtle touch with the card looking like a real one again instils trust in the user and builds the credibility of the brand.

Asking for user's consent to do an online KYC is a green flag because it is ethical & gives the user a feeling of trust. Ideally, the check box must not be auto selected. The choice must be left to the user.

What's your marital status?

Single Married

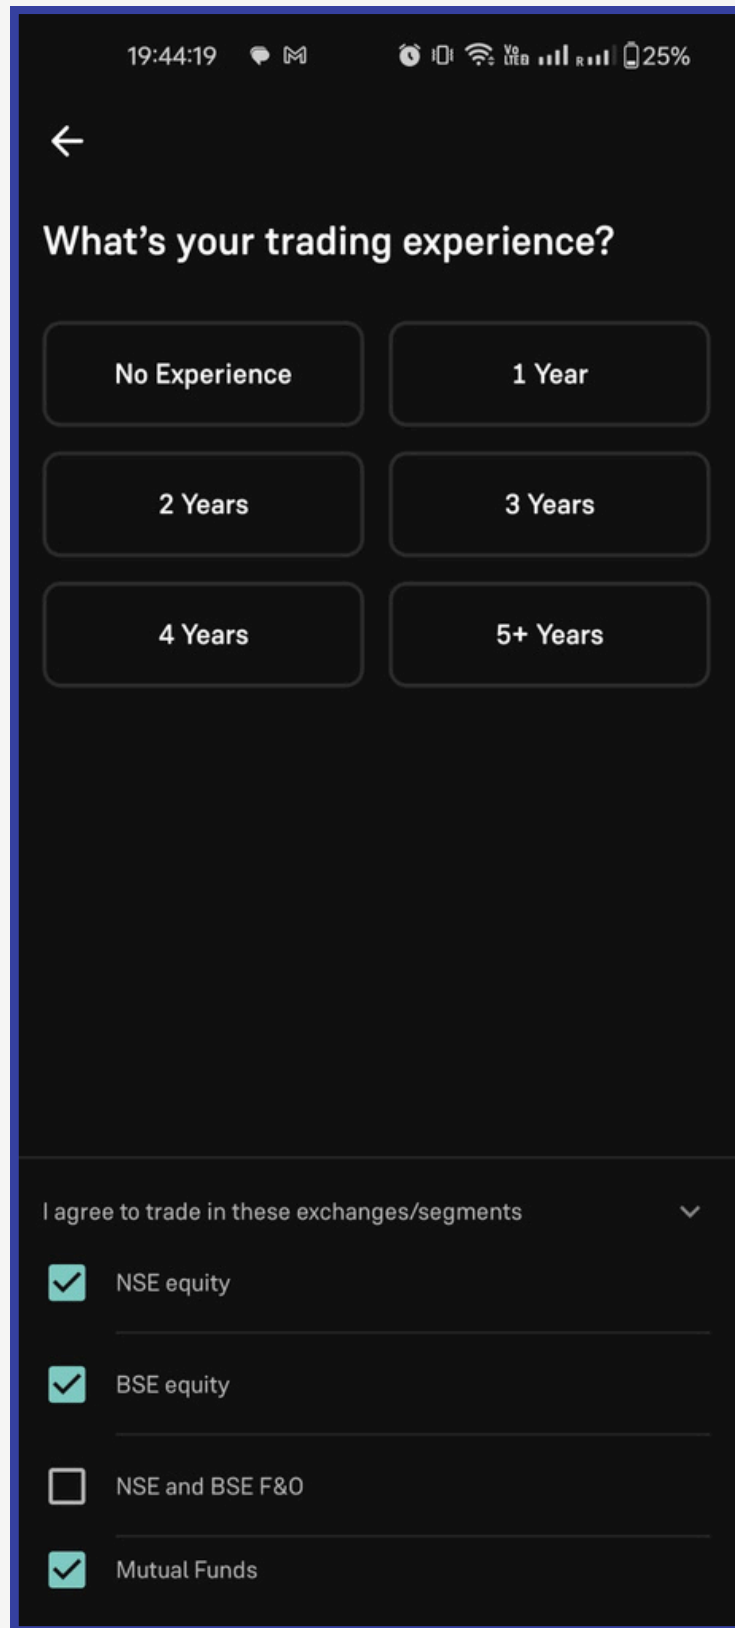

☒ I am not politically-exposed (PEP) or related to a PEP.

Screen 14

The personal details screens are very simple and clear with 3 of them having a check box below. Another example of progressive disclosure (true for the details as well) where instead of having all the checkboxes in one screen, they have added only one on each screen. This makes the UI more clean & reduces cognitive load on the user.

Screen 12 - Mentioned the reason for collecting parents' names building trust.

Screen 14 - An infotip on what a PEP is could be added below the check box.

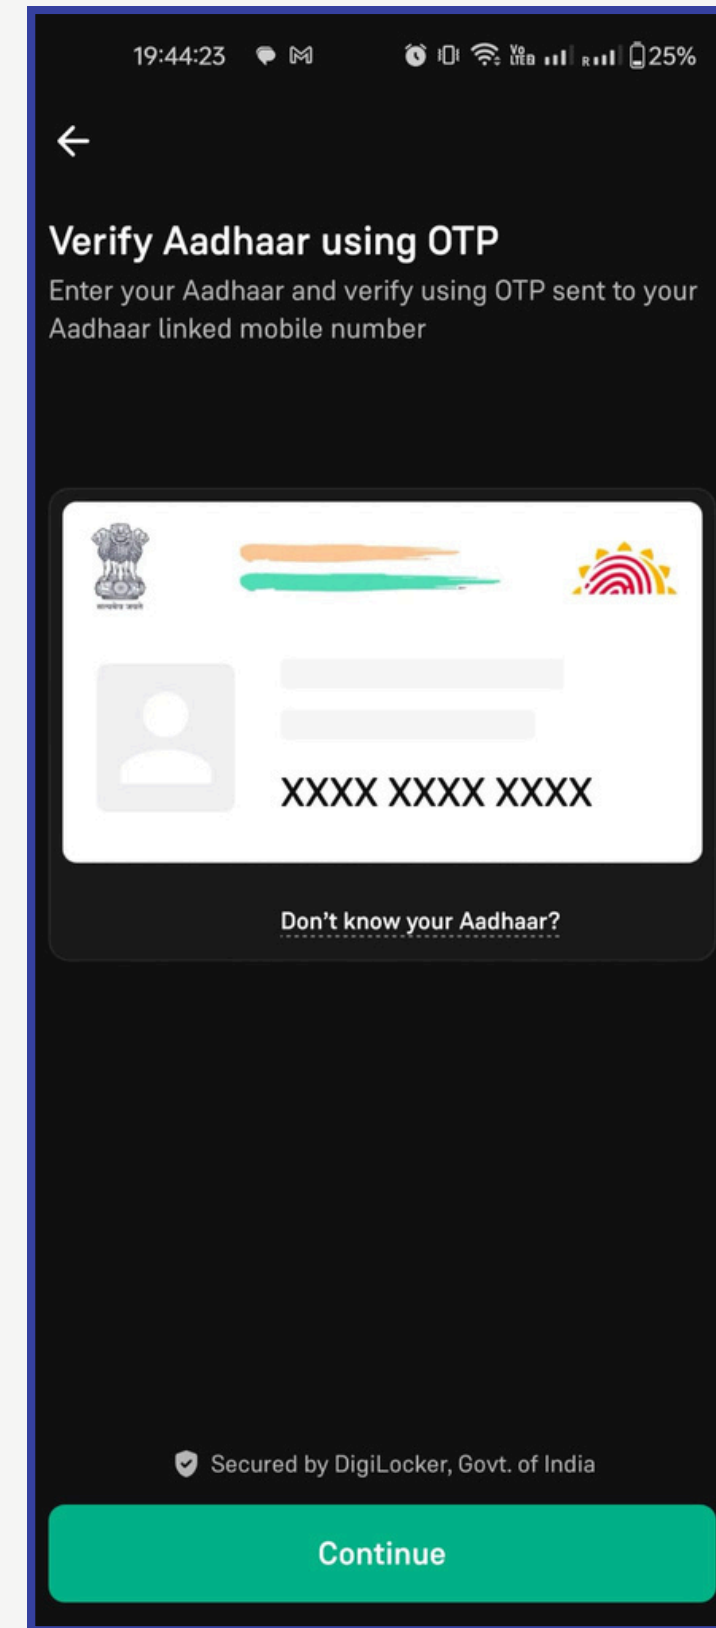

Screen 15

A line mentioning that - the exchanges/segments the user wants to invest in could be edited later - would add value.

The choices at the bottom give the user a taste of the value prop. The user is excited and ready to explore the platform. The choices could be customized according to the trading experience selected.

The user's goals for investing could be asked. (Subjective but could be helpful in placing the right CTAs, showing the correct information, and sending timely notifications.)

Screen 16

Aadhar card shown just like the PAN, building trust and credibility.

A link placed under the card if the user does not know their Aadhar. This is great as it helps the user in completing the onboarding.

Secured by DigiLocker linke above continue again builds trust and security.

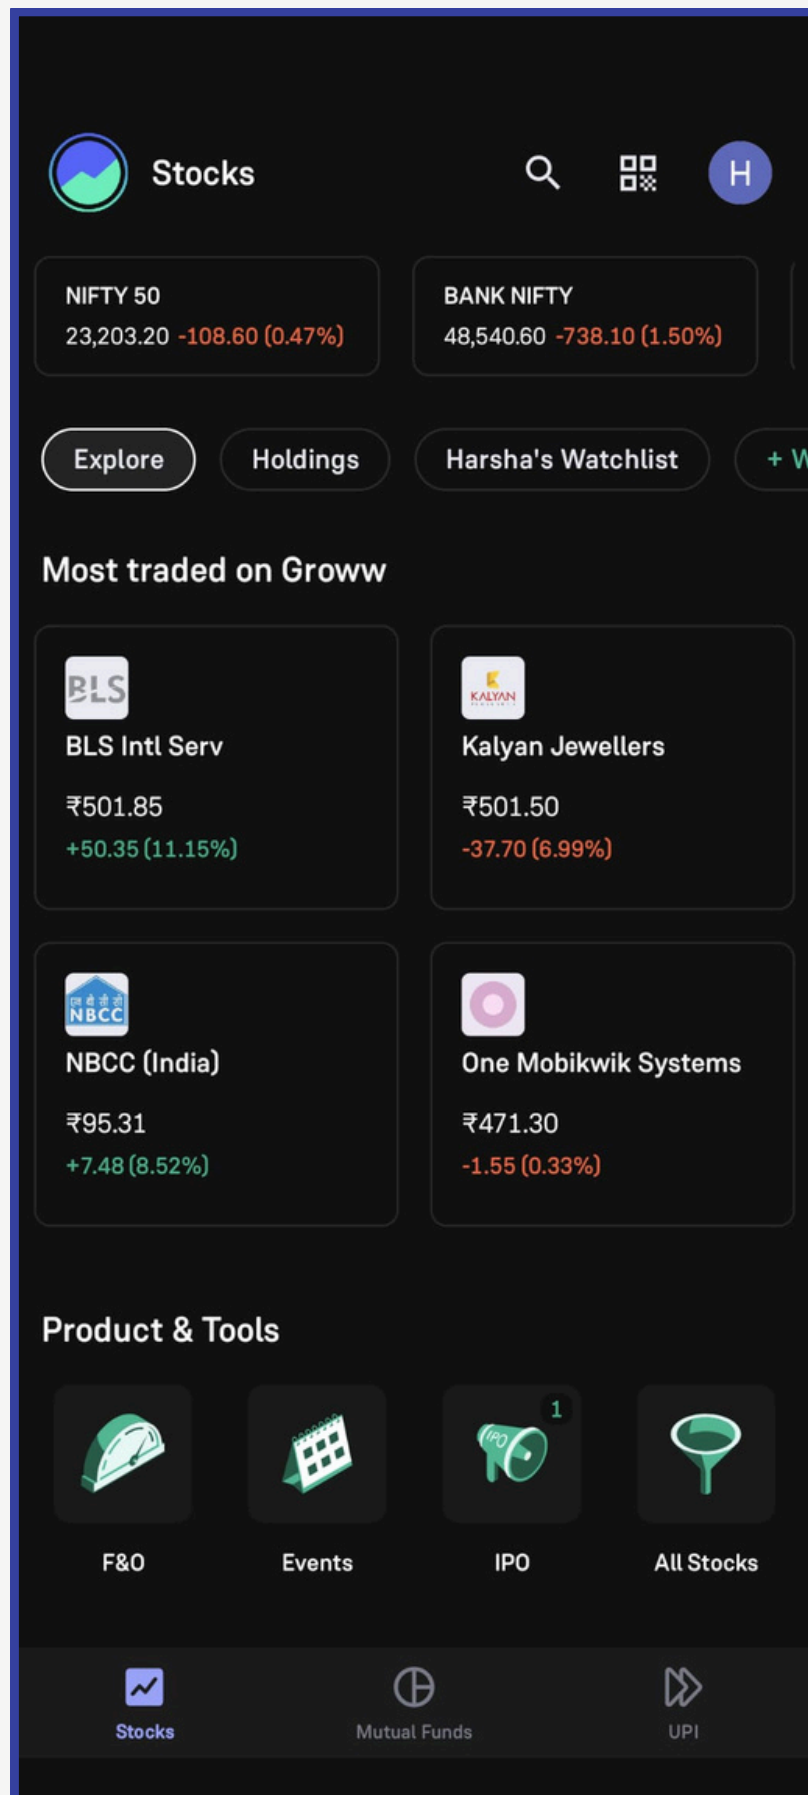

I do not have the screens after this point as the app checks the location to see if the user is in India. We are not in India so we could not continue after this point. But I have done my onboarding 10 days ago and gave my insights below.

All the 5 personal details screens could be placed after the Aadhar verification and eKYC, unless the data is needed to move forward.

This order of screens gives the user the feeling that the onboarding is almost done. They cannot wait longer to experience the app and the its core value prop.

But this is followed by the Aadhar verification (Digilocker integration), eKYC, signature, and Aadhar eSign. This could seem like a lengthy process especially if the user does not have Digilocker installed and ready. I dropped off after the Aadhar verification because I did not have DigiLocker and the flow was cumbersome with too many screens and redirections. I remember feeling impatient and restless.

I eventually completed the process after 4-5 days.

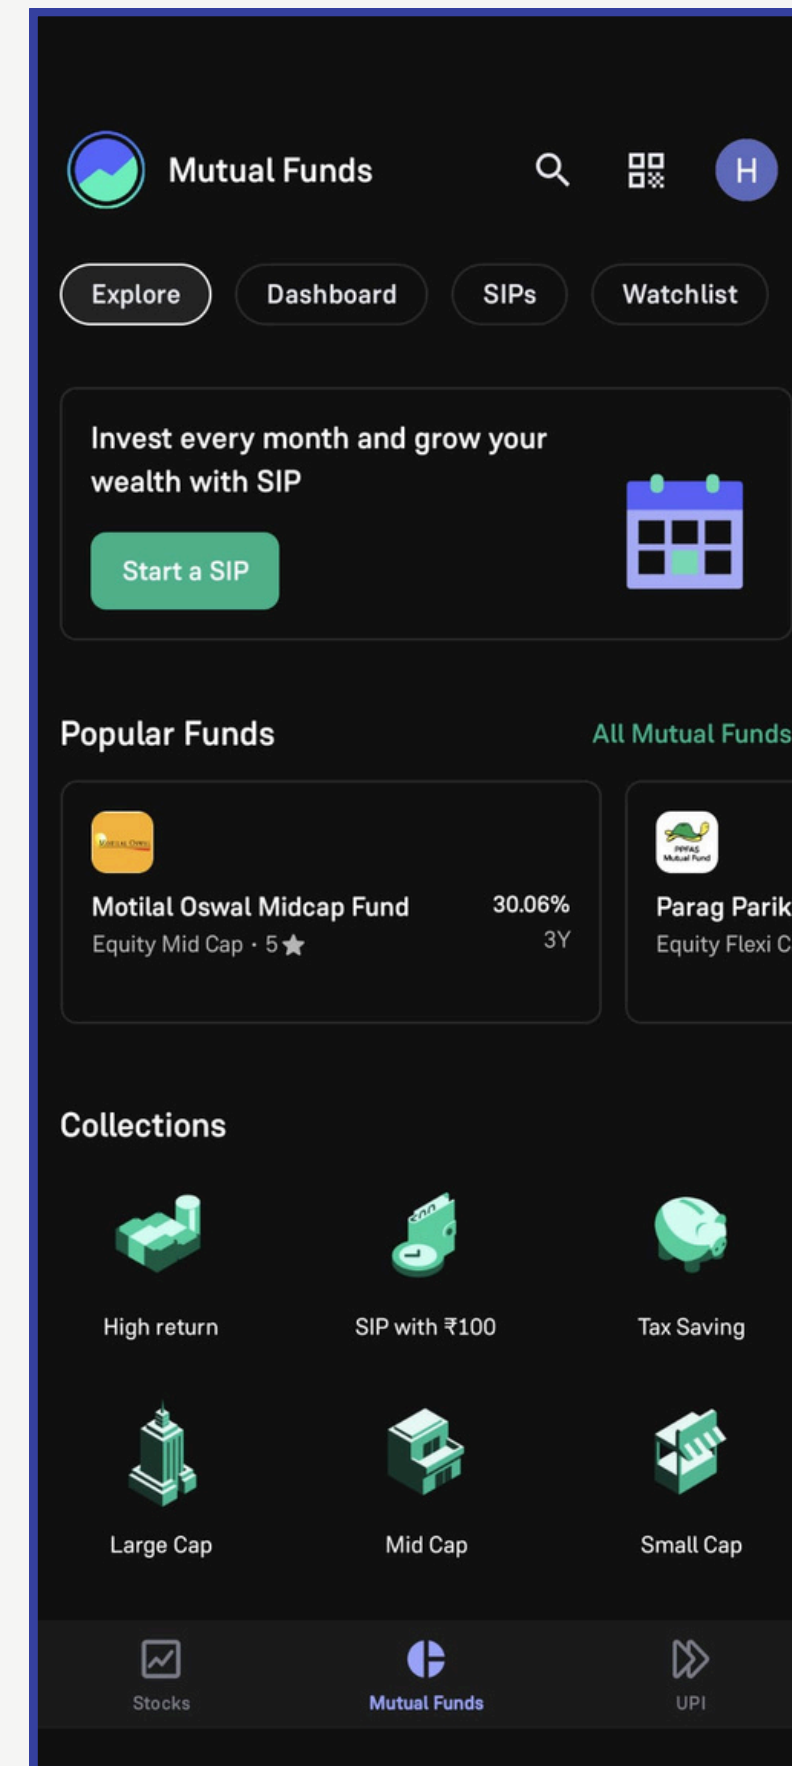

First screen post onboarding

No solid CTA for the user to click on.

The products and tools section must be above the ‘Most Traded on Groww’ section.

Overall, the page is not compelling enough in pushing the user to take action unless they already have an idea of what to invest in.

Short informative videos could be added here to give the user a first action or explain how to invest in their first stock or MF.

The mutual funds screen is better as it has a CTA with the SIP button.

The popular funds section could be removed as it doesn't show more than 2 funds. The collections section could be moved up.

Instead of showing popular funds, funds curated for the user could be shown (based on the data collected during onboarding). This adds a layer of personalization.
